

The “**Hellenic Thesaurus of Scientific Terms**” is a modern terminological tool that is used to describe the subject content of resources and provide access to the documents and the information resources of HEAL-Link. It can be used in the organization of the Online Public Access Catalogs (OPACs) of HEAL -Link, of the Hellenic Academic Libraries Union Catalog, to the subject description and searching for information in their digital repositories as well as in future projects to produce and manage digital content.
